Education

B.S. Software Engineering
(7/2023 – 3/2026) Western Governors University, Salt Lake City, UT

Work History

Lead Maintenance Technician
(11/2025– Present) Coca Cola Consolidated, West Memphis, AR
In this position I perform maintenance repairs on production equipment in a beverage manufacturing facility. This equipment includes bottle blow mold machines, bottle fillers, fill level detection equipment, high speed label machines, laser coders, inkjet coders, case packing equipment, and palletizing equipment. This position requires me to make mechanical, electrical systems, and pneumatic repairs to the aforementioned process equipment as well as all conveyors used in the production operations process. All work performed, time, and any parts used are then logged in SAP via the Osapien Maintenance Android application. As a Maintenance tech, I also use the Osapien app to complete assigned preventive maintenance task.

Maintenance Technician
(7/2025– 11/2025) Frito Lay, Jonesboro, AR
In this role I used troubleshooting techniques to identify issues and make necessary repairs. My duties also included the installation and service of pneumatic and hydraulic systems, control valves, centrifugal and positive displacement pumps, AC/DC electrical systems, read schematics, and the use of electrical testing equipment. Repairs, time, parts, and preventative maintenance task were tracked using a proprietary work order tracking system.

Career Break
(9/2024–7/2025) Focused on Completing Bachelor's Degree
Paused career to turn full focus to completing B.S. in Software Engineering at Western Governors University.

E & I Technician
(5/2011– *9/2024)* Roehm Americas, Osceola, AR
In this position, I was responsible for ensuring the runtime of machinery used in a continuous process that created and recycled monomer, the machinery used in a process which created acrylic sheet, a milling system, and all components of a silo storage / pneumatic conveyance system. These objectives required me to troubleshoot and make necessary mechanical, electrical, pneumatic, and/ or hydraulic repairs to proprietary systems. While troubleshooting I used tools such as; volt meters, amp probe, and plc monitoring / manipulation software (rslogix 500 and rslogix 5000 Allen Bradley's software which can be used to create and run ladder logic programs). Other duties included precision motor and pump installation / alignment, hot oil pump rebuilding, pneumatic cylinder repacking, instrumentation monitoring, maintenance record keeping.

Line Maintenance Technician
(07/2017 – 3/2018) Simplot, West Memphis, AR
In this role I was responsible for responding to technical trouble calls as well as take part in our department's preventative maintenance and predictive maintenance programs. This role required me to troubleshoot and make repairs to production equipment used in the processing and bagging of frozen vegetables for the frozen foods industry. Products packaged included the frozen brands of Swanson, & Great Value. The equipment that I serviced in this role included; vertical bagging machines, empty case erectors, bucket elevators, scale sorters, fastback conveyors, hydraulic tote dumps, & check weighs. All PM work and trouble calls where logged into JDE, our work order and parts tracking system.

Robotics Maintenance Technician
(03/2017 – 7/2017) Borg Warner, Water Valley, MS
In this role I was responsible for responding to technical challenges and issues that would otherwise hinder the production process. This role requires me to troubleshoot and make repairs to production equipment used in the manufacturing and testing of electronic solenoids for the automotive industry. The equipment includes; Robots, conveyors, hydraulic and pneumatic presses, servomotors, servo drives, injection mold machines, and various other rslogix 5000 driven PLC applications. Robots include various Staubli and Epson models. My duties require me to log work performed in a Computerized Maintenance Management System (CMMS) and checkout parts needed for repairs using a parts management software system.

Plant Automation Technician
(7/2016 – *03/2017)* Prairie Farms Dairy, Memphis, TN
In my current role I am responsible for responding to technical challenges and issues that would otherwise hinder the production process. This role requires me to troubleshoot and make mechanical and electrical repairs to equipment used to transport raw milk to storage tanks, pasteurization and homogenization processes, bottle milk and other liquid products, case bottled

liquid products, stack cases of liquid product, transport, palletize, and shrink wrap stacked cases of liquid product. I am also responsible for providing technical support to our blow mold department where resin is pneumatically conveyed from storage silos and extruded and molded into gallon or half gallon jugs. Some of the equipment I make repairs to includes; ink stream daters, product labelers, case washers, casing machines, case stackers, in floor case chain conveyors, centrifugal pumps, conveyance blowers, stack pushers etc.

Plant Engineering Technician
(5/2016 – *7/2016)* United Parcel Services, Memphis, TN
As a Plant Engineering Technician, my responsibilities included; responding to sort process trouble calls, making mechanical and electrical repairs to conveyors and sortation equipment, performing preventive maintenance on equipment that was not scheduled for use, and document all repairs made along with parts used in such repairs. In this position, minimizing downtime was considered utmost priority, and most repairs, if possible, were attempted within a two-hour window, which occurred between sorts. The equipment included; belt and chain driven conveyors, shoe sorters, paddle diverters, monorail conveyors, power industrial trucks, Taylor Dunn personal carrier carts, and various other conveyor-based applications to accomplish the loading and unloading of trailers.

Maintenance Skills

Welding and cutting: MIG, TIG, ARC, plasma, and oxyacetylene. Electrical troubleshooting and PLC ladder logic editing. Electronic soldering. Reading electrical, mechanical, and hydraulic diagrams. Motor repair — hydraulic, DC, and diaphragm pump. Reducer and drive unit rebuilding. Hydraulic cylinder rebuilding and pump repair. Operate and repair scissor lifts, boom lifts, and Genie/JLG lifts. Operate all material handling equipment and use all basic hand and power tools. OSHA trained: Haz Mat, fall protection, hearing and eye protection, Lock Out Tag Out, and MSDS. Allen Bradley and Siemens variable frequency drive setup and programming.

Software Skills

Languages: HTML, CSS, JavaScript, Java, Python, Lua, PHP, C#, Dart, Swift, and SQL. Frameworks and tools: Angular, React, Flutter, Docker, Git, and PostgreSQL. IDEs: Android Studio, Xcode, VS Code, and IntelliJ IDEA.
